Issue: How to calculate occupancy rates of Robot/Machines using RoboDK
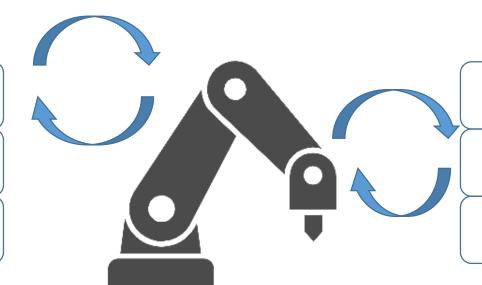

We are considering a system that a single robot to load/unload workpieces
with different processing times in any order. Does RoboDK estimate the times

1) Robot occupancy rate
2) Machine occupancy rates
3) Waiting time for load/unload
4) How many machining equipment can be covered with a single robot

【D】 Processing time:5min.

【E】 Processing time:20min.

【F】 Processing time:20min.

【A】 Processing time:30min.

【B】 Processing time:30min.

【C】 Processing time:30min.
